EDUCATION

Georgia Institute of Technology

August 2023 - May 2026

Bachelor of Science in Computer Science - GPA 3.85

Atlanta, GA

- Relevant Coursework: Data Structures & Algorithms, Design & Analysis of Algorithms, Intro to Database Systems, Systems & Networks, Computer Organization & Programming, Intro to AI, Object-Oriented Programming

EXPERIENCE

Software Engineer Intern

June 2026 – Present

Kargo

San Francisco, CA

- Optimized a four-camera image retrieval pipeline with a caching mechanism, reducing latency by 95%
- Integrated 11 end-of-line optical tests into an internal Django runbook for tower and forklift cameras
- Built a Django Admin tool to automate bulk assignment of device deployment metadata from Excel uploads
- Automated deployment configuration by generating config files, creating pull requests, and notifying reviewers via Slack

Software Engineer Intern

May 2025 – July 2025

Ecliptic Enterprises

Pasadena, CA

- Developed a Wireshark Lua dissector for CCSDS telemetry packets, enabling real-time subsystem data visualization
- Parsed 20+ unique message types and automated field extraction, reducing debugging time from minutes to seconds
- Optimized a UDP-based pipeline turning raw video data into CCSDS packets, boosting streaming throughput by 35%
- Produced a PySide6 GUI for dual-camera tracking, delivering real-time video at 60 FPS with under 50 ms latency

Software Engineer Intern

May 2024 – July 2024

Hyosung FMS

Seoul, South Korea

- Deployed an email-sending API to automate mass email distribution to clients, ensuring reliable large-scale delivery
- Reduced email response time by 70% by utilizing asynchronous programming in Spring Boot
- Implemented JPA and MyBatis for SQL operations and managed 500+ email records in a local MySQL database
- Refactored and enhanced 15+ methods for efficiently handling administrative HTTP requests

Game Developer

Jan. 2024 – May 2025

Georgia Tech VIP Program

Atlanta, GA

- Built a Unity-powered strategy video game based on simulating electric power grids in a collaborative environment
- Engineered a camera control system in C# that led to a 100% decrease in camera-related bugs
- Created 20+ interactive features using Unity's UI tools, enabling players to explore unique game mechanics
- Authored 200+ lines of in-game dialogue and developer documentation, streamlining onboarding for new members

PROJECTS

Fantasy Premier League Analyzer | *Express, React, JavaScript, Vite*

- Engineered a full-stack FPL analysis app that processes 600+ players, loads live squad data, and recommends top picks
- Architected a scoring model using 14+ metrics including form, fixtures, and value with position-specific calibration
- Integrated the FPL API through an Express proxy and developed interactive search and player detail views in React

Spotify Personal Dashboard | *Java, Android Studio*

- Developed a personal Spotify music insight dashboard application on Android Studio using Spotify API
- Utilized Firebase to securely store user data, ensuring its accessibility across multiple devices
- Optimized app performance by leveraging Android Studio's Profiler tools, resulting in a 30% reduction in load times

"Chronobreak", a 2D Puzzle Platformer Game | *C#, Unity*

- Programmed and designed a single-player video game featuring innovative time-freezing mechanics using Unity
- Devised advanced collision detection and precise velocity manipulation using Unity's 2D physics engine
- Incorporated multiple UI systems, including an interactive level selection map, a main menu, and an item shop

TECHNICAL SKILLS

Languages: Python, Java, C++, JavaScript, SQL, C#, Lua, HTML, CSS

Framework & Libraries: Spring Boot, Django, React, gRPC, OpenCV, pybind11, NumPy, Pandas, PySide6

Tools & Platforms: Git, Bitbucket, Docker, AWS, MySQL, MongoDB, Celery, Postman, Wireshark

Interests: Soccer, Tennis, Cooking, Fitness, Graphic Design, Game Development,
